Supplementary Table S1 Image conditions

Supplement to CEAI-3-4-3 — Global Sharpness as an Image-Quality Gate for Gas-Pipeline Defect Segmentation

Complete source records are presented as editable Word tables. Numeric strings retain the source precision. Row is the one-based data-row number in the named CSV, excluding its header. Codes are decoded in the legends; fields constant within a block are stated immediately above its table. No observations are omitted.

Blank cells retain missing or inapplicable source entries and are not zero. inf and -inf retain positive and negative infinity. An image version is one image under one condition; object-seed observations combine an annotated object and a checkpoint. Confidence intervals use source-family resampling. Status labels distinguish pre-specified and exploratory results. See the manuscript and protocol for metric definitions and analysis limitations.

S1_conditions.csv

14 records in this document; 14 records in the complete source. All 9 source fields are retained.

Source field	Definition or reading instruction
condition	Exact source field; categorical values are given in the legend when coded.
perturbation	Exact source field; categorical values are given in the legend when coded.
parameter	Exact source field; categorical values are given in the legend when coded.
implementation	Exact source field; categorical values are given in the legend when coded.
provenance	Exact source field; categorical values are given in the legend when coded.
prior_object_level_outcomes_on_evaluation	Exact source field; categorical values are given in the legend when coded.
median_S_validation	Exact source field; categorical values are given in the legend when coded.
median_S_evaluation	Exact source field; categorical values are given in the legend when coded.
median_mean_luminance_validation	Exact source field; categorical values are given in the legend when coded.

Supplementary Table S2 Thresholds and bootstrap distributions

Supplement to CEAI-3-4-3 — Global Sharpness as an Image-Quality Gate for Gas-Pipeline Defect Segmentation

Complete source records are presented as editable Word tables. Numeric strings retain the source precision. Row is the one-based data-row number in the named CSV, excluding its header. Codes are decoded in the legends; fields constant within a block are stated immediately above its table. No observations are omitted.

Blank cells retain missing or inapplicable source entries and are not zero. inf and -inf retain positive and negative infinity. An image version is one image under one condition; object-seed observations combine an annotated object and a checkpoint. Confidence intervals use source-family resampling. Status labels distinguish pre-specified and exploratory results. See the manuscript and protocol for metric definitions and analysis limitations.

S2_threshold_grids.csv

20 records in this document; 20 records in the complete source. All 16 source fields are retained.

Source field	Definition or reading instruction
variant	Exact source field; categorical values are given in the legend when coded.
gate	Exact source field; categorical values are given in the legend when coded.
class	Exact source field; categorical values are given in the legend when coded.
delta	Policy margin for this row.
t_A_original	Exact source field; categorical values are given in the legend when coded.
t_A_corrected	Exact source field; categorical values are given in the legend when coded.
t_R_original	Exact source field; categorical values are given in the legend when coded.
t_R_corrected	Exact source field; categorical values are given in the legend when coded.
accept_share_validation	Fraction of validation image versions accepted.
FRR_nom_validation	Fraction of nominal validation images not accepted.
tAb_replicates_pos_inf	Exact source field; categorical values are given in the legend when coded.
tAb_replicates_neg_inf	Exact source field; categorical values are given in the legend when coded.
tAb_replicates_finite	Exact source field; categorical values are given in the legend when coded.
tAb_pct_full_per_protocol	Exact source field; categorical values are given in the legend when coded.
tAb_pct_conditional_on_finite	Exact source field; categorical values are given in the legend when coded.
prespecification_status	Exact prespecification label; exploratory rows are explicitly identified.

Supplementary Table S3 Part 1 Per condition results for deformation

Supplement to CEAI-3-4-3 — Global Sharpness as an Image-Quality Gate for Gas-Pipeline Defect Segmentation

Complete source records are presented as editable Word tables. Numeric strings retain the source precision. Row is the one-based data-row number in the named CSV, excluding its header. Codes are decoded in the legends; fields constant within a block are stated immediately above its table. No observations are omitted.

Blank cells retain missing or inapplicable source entries and are not zero. inf and -inf retain positive and negative infinity. An image version is one image under one condition; object-seed observations combine an annotated object and a checkpoint. Confidence intervals use source-family resampling. Status labels distinguish pre-specified and exploratory results. See the manuscript and protocol for metric definitions and analysis limitations.

Metric definitions: RF is the residual-failure fraction among accepted object-seed observations. MISS is the fraction unassigned or assigned with mask IoU below 0.35; LOC is the fraction assigned with 0.35 <= IoU < 0.50. RF = MISS + LOC. A valid match has mask IoU >= 0.50 under the study matching protocol.

IM is the fraction of accepted version-seed pairs containing at least one object of the class for which at least one valid match is missing. FP_per_accepted_version_seed is the mean class-specific false-positive count per accepted version-seed pair; the suffix _no_object restricts it to accepted versions without an annotated object of that class.

DEF is the fraction of object-seed observations outside Accept. WS is the valid-match fraction among those non-accepted observations. FC is the fraction of all failures that fall outside Accept. accept_share is the fraction of image versions accepted. Numerator and denominator give the count basis for the particular metric; these units must not be interchanged.

Corrosion results are descriptive because of the small class size; their presence in exported tables does not establish confirmatory evidence. G0 denotes no gating. Exact rule, class, condition and prespecification labels are retained in the legends.

S3_per_condition_metrics.csv

2,380 records in this document; 7,140 records in the complete source. All 11 source fields are retained.

Source field	Definition or reading instruction
condition	Exact source field; categorical values are given in the legend when coded.
class	Exact source field; categorical values are given in the legend when coded.
gate	Exact source field; categorical values are given in the legend when coded.
metric	Exact source field; categorical values are given in the legend when coded.
value	Point estimate; units depend on the metric.
ci_lo	Lower endpoint of the reported confidence interval.
ci_hi	Upper endpoint of the reported confidence interval.
numerator	Metric-specific numerator from the source table.
denominator	Metric-specific denominator from the source table.
bootstrap_undefined	Number of undefined bootstrap replicates.
prespecification_status	Exact prespecification label; exploratory rows are explicitly identified.

Supplementary Table S3 Part 2 Per condition results for gas-pipelines

Supplement to CEAI-3-4-3 — Global Sharpness as an Image-Quality Gate for Gas-Pipeline Defect Segmentation

Complete source records are presented as editable Word tables. Numeric strings retain the source precision. Row is the one-based data-row number in the named CSV, excluding its header. Codes are decoded in the legends; fields constant within a block are stated immediately above its table. No observations are omitted.

Blank cells retain missing or inapplicable source entries and are not zero. inf and -inf retain positive and negative infinity. An image version is one image under one condition; object-seed observations combine an annotated object and a checkpoint. Confidence intervals use source-family resampling. Status labels distinguish pre-specified and exploratory results. See the manuscript and protocol for metric definitions and analysis limitations.

Metric definitions: RF is the residual-failure fraction among accepted object-seed observations. MISS is the fraction unassigned or assigned with mask IoU below 0.35; LOC is the fraction assigned with 0.35 <= IoU < 0.50. RF = MISS + LOC. A valid match has mask IoU >= 0.50 under the study matching protocol.

IM is the fraction of accepted version-seed pairs containing at least one object of the class for which at least one valid match is missing. FP_per_accepted_version_seed is the mean class-specific false-positive count per accepted version-seed pair; the suffix _no_object restricts it to accepted versions without an annotated object of that class.

DEF is the fraction of object-seed observations outside Accept. WS is the valid-match fraction among those non-accepted observations. FC is the fraction of all failures that fall outside Accept. accept_share is the fraction of image versions accepted. Numerator and denominator give the count basis for the particular metric; these units must not be interchanged.

Corrosion results are descriptive because of the small class size; their presence in exported tables does not establish confirmatory evidence. G0 denotes no gating. Exact rule, class, condition and prespecification labels are retained in the legends.

S3_per_condition_metrics.csv

2,380 records in this document; 7,140 records in the complete source. All 11 source fields are retained.

Source field	Definition or reading instruction
condition	Exact source field; categorical values are given in the legend when coded.
class	Exact source field; categorical values are given in the legend when coded.
gate	Exact source field; categorical values are given in the legend when coded.
metric	Exact source field; categorical values are given in the legend when coded.
value	Point estimate; units depend on the metric.
ci_lo	Lower endpoint of the reported confidence interval.
ci_hi	Upper endpoint of the reported confidence interval.
numerator	Metric-specific numerator from the source table.
denominator	Metric-specific denominator from the source table.
bootstrap_undefined	Number of undefined bootstrap replicates.
prespecification_status	Exact prespecification label; exploratory rows are explicitly identified.

Exact value legends

Supplementary Table S3 Part 3 Per condition results for corrosion

Supplement to CEAI-3-4-3 — Global Sharpness as an Image-Quality Gate for Gas-Pipeline Defect Segmentation

Complete source records are presented as editable Word tables. Numeric strings retain the source precision. Row is the one-based data-row number in the named CSV, excluding its header. Codes are decoded in the legends; fields constant within a block are stated immediately above its table. No observations are omitted.

Blank cells retain missing or inapplicable source entries and are not zero. inf and -inf retain positive and negative infinity. An image version is one image under one condition; object-seed observations combine an annotated object and a checkpoint. Confidence intervals use source-family resampling. Status labels distinguish pre-specified and exploratory results. See the manuscript and protocol for metric definitions and analysis limitations.

Metric definitions: RF is the residual-failure fraction among accepted object-seed observations. MISS is the fraction unassigned or assigned with mask IoU below 0.35; LOC is the fraction assigned with 0.35 <= IoU < 0.50. RF = MISS + LOC. A valid match has mask IoU >= 0.50 under the study matching protocol.

IM is the fraction of accepted version-seed pairs containing at least one object of the class for which at least one valid match is missing. FP_per_accepted_version_seed is the mean class-specific false-positive count per accepted version-seed pair; the suffix _no_object restricts it to accepted versions without an annotated object of that class.

DEF is the fraction of object-seed observations outside Accept. WS is the valid-match fraction among those non-accepted observations. FC is the fraction of all failures that fall outside Accept. accept_share is the fraction of image versions accepted. Numerator and denominator give the count basis for the particular metric; these units must not be interchanged.

Corrosion results are descriptive because of the small class size; their presence in exported tables does not establish confirmatory evidence. G0 denotes no gating. Exact rule, class, condition and prespecification labels are retained in the legends.

S3_per_condition_metrics.csv

2,380 records in this document; 7,140 records in the complete source. All 11 source fields are retained.

Source field	Definition or reading instruction
condition	Exact source field; categorical values are given in the legend when coded.
class	Exact source field; categorical values are given in the legend when coded.
gate	Exact source field; categorical values are given in the legend when coded.
metric	Exact source field; categorical values are given in the legend when coded.
value	Point estimate; units depend on the metric.
ci_lo	Lower endpoint of the reported confidence interval.
ci_hi	Upper endpoint of the reported confidence interval.
numerator	Metric-specific numerator from the source table.
denominator	Metric-specific denominator from the source table.
bootstrap_undefined	Number of undefined bootstrap replicates.
prespecification_status	Exact prespecification label; exploratory rows are explicitly identified.

Exact value legends

Supplementary Table S4 Part 1 Metrics across streams

Supplement to CEAI-3-4-3 — Global Sharpness as an Image-Quality Gate for Gas-Pipeline Defect Segmentation

Complete source records are presented as editable Word tables. Numeric strings retain the source precision. Row is the one-based data-row number in the named CSV, excluding its header. Codes are decoded in the legends; fields constant within a block are stated immediately above its table. No observations are omitted.

Blank cells retain missing or inapplicable source entries and are not zero. inf and -inf retain positive and negative infinity. An image version is one image under one condition; object-seed observations combine an annotated object and a checkpoint. Confidence intervals use source-family resampling. Status labels distinguish pre-specified and exploratory results. See the manuscript and protocol for metric definitions and analysis limitations.

Metric definitions: RF is the residual-failure fraction among accepted object-seed observations. MISS is the fraction unassigned or assigned with mask IoU below 0.35; LOC is the fraction assigned with 0.35 <= IoU < 0.50. RF = MISS + LOC. A valid match has mask IoU >= 0.50 under the study matching protocol.

IM is the fraction of accepted version-seed pairs containing at least one object of the class for which at least one valid match is missing. FP_per_accepted_version_seed is the mean class-specific false-positive count per accepted version-seed pair; the suffix _no_object restricts it to accepted versions without an annotated object of that class.

DEF is the fraction of object-seed observations outside Accept. WS is the valid-match fraction among those non-accepted observations. FC is the fraction of all failures that fall outside Accept. accept_share is the fraction of image versions accepted. Numerator and denominator give the count basis for the particular metric; these units must not be interchanged.

Corrosion results are descriptive because of the small class size; their presence in exported tables does not establish confirmatory evidence. G0 denotes no gating. Exact rule, class, condition and prespecification labels are retained in the legends.

S4_metrics_all_streams.csv

1,020 records in this document; 1,020 records in the complete source. All 12 source fields are retained.

Source field	Definition or reading instruction
stream	Exact source field; categorical values are given in the legend when coded.
variant	Exact source field; categorical values are given in the legend when coded.
gate	Exact source field; categorical values are given in the legend when coded.
class	Exact source field; categorical values are given in the legend when coded.
metric	Exact source field; categorical values are given in the legend when coded.
value	Point estimate; units depend on the metric.
ci_lo	Lower endpoint of the reported confidence interval.
ci_hi	Upper endpoint of the reported confidence interval.
numerator	Metric-specific numerator from the source table.
denominator	Metric-specific denominator from the source table.
bootstrap_undefined	Number of undefined bootstrap replicates.

Source field	Definition or reading instruction
prespecification_status	Exact prespecification label; exploratory rows are explicitly identified.

Exact value legends

Source field	Code	Exact source value
stream	1.1	all14
stream	1.2	S3_arch10
variant	2.1	full
variant	2.2	S4_no_outlier
gate	3.1	G0
gate	3.2	G-cal[delta_0.013]

Supplementary Table S4 Part 2 Residual failure differences

Supplement to CEAI-3-4-3 — Global Sharpness as an Image-Quality Gate for Gas-Pipeline Defect Segmentation

Complete source records are presented as editable Word tables. Numeric strings retain the source precision. Row is the one-based data-row number in the named CSV, excluding its header. Codes are decoded in the legends; fields constant within a block are stated immediately above its table. No observations are omitted.

Blank cells retain missing or inapplicable source entries and are not zero. inf and -inf retain positive and negative infinity. An image version is one image under one condition; object-seed observations combine an annotated object and a checkpoint. Confidence intervals use source-family resampling. Status labels distinguish pre-specified and exploratory results. See the manuscript and protocol for metric definitions and analysis limitations.

S4_delta_all_streams.csv

96 records in this document; 96 records in the complete source. All 10 source fields are retained.

Source field	Definition or reading instruction
stream	Exact source field; categorical values are given in the legend when coded.
variant	Exact source field; categorical values are given in the legend when coded.
gate	Exact source field; categorical values are given in the legend when coded.
class	Exact source field; categorical values are given in the legend when coded.
delta_RF_vs_G0	Residual-failure difference relative to the no-gate baseline.
ci_lo	Lower endpoint of the reported confidence interval.
ci_hi	Upper endpoint of the reported confidence interval.
bootstrap_undefined	Number of undefined bootstrap replicates.
analysis	Exact source field; categorical values are given in the legend when coded.
prespecification_status	Exact prespecification label; exploratory rows are explicitly identified.

Exact value legends

Source field	Code	Exact source value
stream	1.1	all14
stream	1.2	S3_arch10
variant	2.1	full
variant	2.2	S4_no_outlier
gate	3.1	G-cal[delta_0.013]
gate	3.2	G-cal[delta_0.026]
gate	3.3	G-cal[delta_0.039]
gate	3.4	G-cal[delta_0.052]

Source field	Code	Exact source value
gate	3.5	G-cal|eps[0.025]
gate	3.6	G-cal|eps[0.05]
gate	3.7	G-cal|eps[0.1]
gate	3.8	G-raw[delta_0.013]

Supplementary Table S4 Part 3 Non inferiority comparisons

Supplement to CEAI-3-4-3 — Global Sharpness as an Image-Quality Gate for Gas-Pipeline Defect Segmentation

Complete source records are presented as editable Word tables. Numeric strings retain the source precision. Row is the one-based data-row number in the named CSV, excluding its header. Codes are decoded in the legends; fields constant within a block are stated immediately above its table. No observations are omitted.

Blank cells retain missing or inapplicable source entries and are not zero. inf and -inf retain positive and negative infinity. An image version is one image under one condition; object-seed observations combine an annotated object and a checkpoint. Confidence intervals use source-family resampling. Status labels distinguish pre-specified and exploratory results. See the manuscript and protocol for metric definitions and analysis limitations.

S4_non_inferiority.csv

34 records in this document; 34 records in the complete source. All 11 source fields are retained.

Source field	Definition or reading instruction
class	Exact source field; categorical values are given in the legend when coded.
gate	Exact source field; categorical values are given in the legend when coded.
p_nom_eval	Nominal evaluation valid-match rate.
accepted_rate	Valid-match rate among accepted object-seed observations.
NI	Accepted valid-match rate minus nominal evaluation valid-match rate; not the policy margin.
ci_lo	Lower endpoint of the reported confidence interval.
ci_hi	Upper endpoint of the reported confidence interval.
delta	Policy margin for this row.
non_inferiority_demonstrated	Exact source field; categorical values are given in the legend when coded.
note	Exact source field; categorical values are given in the legend when coded.
prespecification_status	Exact prespecification label; exploratory rows are explicitly identified.

Exact value legends

Source field	Code	Exact source value
class	1.1	deformation
class	1.2	gas-pipelines
gate	2.1	G0
gate	2.2	G-cal[delta_0.013]
gate	2.3	G-cal[delta_0.026]
gate	2.4	G-cal[delta_0.039]
gate	2.5	G-cal[delta_0.052]

Source field	Code	Exact source value
gate	2.6	G-cal|eps[0.025]
gate	2.7	G-cal|eps[0.05]
gate	2.8	G-cal|eps[0.1]
gate	2.9	G-raw[delta_0.013]
gate	2.10	G-raw[delta_0.026]

Supplementary Table S4 Part 4 Checkpoint results

Supplement to CEAI-3-4-3 — Global Sharpness as an Image-Quality Gate for Gas-Pipeline Defect Segmentation

Complete source records are presented as editable Word tables. Numeric strings retain the source precision. Row is the one-based data-row number in the named CSV, excluding its header. Codes are decoded in the legends; fields constant within a block are stated immediately above its table. No observations are omitted.

Blank cells retain missing or inapplicable source entries and are not zero. inf and -inf retain positive and negative infinity. An image version is one image under one condition; object-seed observations combine an annotated object and a checkpoint. Confidence intervals use source-family resampling. Status labels distinguish pre-specified and exploratory results. See the manuscript and protocol for metric definitions and analysis limitations.

S4_per_checkpoint.csv

170 records in this document; 170 records in the complete source. All 8 source fields are retained.

Source field	Definition or reading instruction
gate	Exact source field; categorical values are given in the legend when coded.
class	Exact source field; categorical values are given in the legend when coded.
seed	Checkpoint seed.
RF_accepted	Residual failure among accepted observations.
RF_G0	Residual failure without gating.
n_accepted_obs	Number of accepted object-seed observations.
delta_vs_G0	Difference relative to the no-gate baseline.
prespecification_status	Exact prespecification label; exploratory rows are explicitly identified.

Exact value legends

Source field	Code	Exact source value
gate	1.1	G0
gate	1.2	G-cal[delta_0.013]
gate	1.3	G-cal[delta_0.026]
gate	1.4	G-cal[delta_0.039]
gate	1.5	G-cal[delta_0.052]
gate	1.6	G-cal|eps[0.025]
gate	1.7	G-cal|eps[0.05]
gate	1.8	G-cal|eps[0.1]
gate	1.9	G-raw[delta_0.013]
gate	1.10	G-raw[delta_0.026]

Source field	Code	Exact source value
gate	1.11	G-raw[delta_0.039]
gate	1.12	G-raw[delta_0.052]
gate	1.13	G-env[0.025]
gate	1.14	G-env[0.05]
gate	1.15	G-env[0.1]
gate	1.16	S5 G-cal-pipe[delta_0.015]
gate	1.17	S5 G-raw-pipe[delta_0.015] [EXPLORATORY]
class	2.1	deformation
class	2.2	gas-pipelines
prespecification_status	8.1	pre-specified (Protocol v1.0)
prespecification_status	8.2	pre-specified (Protocol v1.0 section 9, sensitivity S5)
prespecification_status	8.3	EXPLORATORY - not pre-specified in Protocol v1.0

Supplementary Table S4 Part 5 Corrosion counts

Supplement to CEAI-3-4-3 — Global Sharpness as an Image-Quality Gate for Gas-Pipeline Defect Segmentation

Complete source records are presented as editable Word tables. Numeric strings retain the source precision. Row is the one-based data-row number in the named CSV, excluding its header. Codes are decoded in the legends; fields constant within a block are stated immediately above its table. No observations are omitted.

Blank cells retain missing or inapplicable source entries and are not zero. inf and -inf retain positive and negative infinity. An image version is one image under one condition; object-seed observations combine an annotated object and a checkpoint. Confidence intervals use source-family resampling. Status labels distinguish pre-specified and exploratory results. See the manuscript and protocol for metric definitions and analysis limitations.

S4_corrosion_counts.csv

17 records in this document; 17 records in the complete source. All 7 source fields are retained.

Source field	Definition or reading instruction
gate	Exact source field; categorical values are given in the legend when coded.
corrosion_obs_total	Exact source field; categorical values are given in the legend when coded.
accepted	Exact source field; categorical values are given in the legend when coded.
accepted_valid_matches	Exact source field; categorical values are given in the legend when coded.
not_accepted	Exact source field; categorical values are given in the legend when coded.
not_accepted_valid_matches	Exact source field; categorical values are given in the legend when coded.
prespecification_status	Exact prespecification label; exploratory rows are explicitly identified.

Exact value legends

Source field	Code	Exact source value
gate	1.1	G0
gate	1.2	G-cal[delta_0.013]
gate	1.3	G-cal[delta_0.026]
gate	1.4	G-cal[delta_0.039]
gate	1.5	G-cal[delta_0.052]
gate	1.6	G-cal|eps[0.025]
gate	1.7	G-cal|eps[0.05]
gate	1.8	G-cal|eps[0.1]
gate	1.9	G-raw[delta_0.013]
gate	1.10	G-raw[delta_0.026]
gate	1.11	G-raw[delta_0.039]

Source field	Code	Exact source value
gate	1.12	G-raw[delta_0.052]
gate	1.13	G-env[0.025]
gate	1.14	G-env[0.05]
gate	1.15	G-env[0.1]
gate	1.16	S5 G-cal-pipe[delta_0.015]
gate	1.17	S5 G-raw-pipe[delta_0.015] [EXPLORATORY]
prespecification_status	7.1	pre-specified (Protocol v1.0)
prespecification_status	7.2	pre-specified (Protocol v1.0 section 9, sensitivity S5)
prespecification_status	7.3	EXPLORATORY - not pre-specified in Protocol v1.0

Data block 1 panel 1 of 1

Columns: F1 = gate; F2 = corrosion_obs_total; F3 = accepted; F4 = accepted_valid_matches; F5 = not_accepted; F6 = not_accepted_valid_matches; F7 = prespecification_status
